

Introduction – The purpose of this note is to provide installation instructions and comments on a patch for the CQ/X Client software. The patch applies to version 1.7.6 of the software and is provided to implement enhancements and fix the problems described below.

Previous Patches – This is the first patch for version 1.7.6. Users of version 1.7.5 that have installed all of the patches for that version and patches 175-01, 175-02, 175-03, 175-04, and 175-06 can apply this patch without downloading version 1.7.6. Other users should first download and install a full copy of version 1.7.6 from www.no5w.com prior to applying Patch 175-06.

Installation – In addition to these notes the zip file associated with this patch contains a setup file for automatically installing the patch in C:\ProgramFiles\CWSoft\CQXClient\. **WARNING: Please note that the setup file assumes that you have installed the program in C:\Program Files\CWSoft\.** If this is not the case you can still run the setup but following this you will need to manually copy each of the files to their corresponding directories in your location. Here's a list of the files contained in this patch and a description of where they will be installed.

File	Installation
TQP.DLL	This is the DLL that is used to implement each of the State/Regions! QSO parties and replaces the file of the same name in the ContestDefns subdirectory which in the standard installation is C:\Program Files\CWSoft\CqxClient\ContestDefns
CQXClient.exe CQXClient.hlp CQXClient.cnt	This is the main executable and associated help files. They replace the files of the same names in the main directory which in the standard installation is C:\Program Files\CWSoft\CqxClient\

Problems Addressed/Enhancements – The following problems/enhancements are addressed.

Problem/Enhancement	Description
It would be good to be able to select call from the Similar Calls page and copy it to the QSO Entry window	The Similar Calls list can be focused using the Shift+ArrowUp/Down keys to select a call. Once a call is selected holding Shift down while pressing Enter will send the call followed by a question mark. Once a call is selected releasing the Shift key and pressing Enter will append the call to the logging QSO Entry window and will refocus that window.
Using RIT from the K3 interface is somewhat cumbersome. It would be good to be able to tune the RIT without having to call up or Alt Tab to the K3 interface,	For radios that support tuning of the RIT under PC control special keystrokes Shift + ArrowLeft/Right key will tune the RIT down/up.
In the OK QP a dialog requesting start time is hidden making it appear that the program has stalled	The offending dialog was removed.
